Kuuma Small Low Profile

Printable Installation Template

Use this template to test stove placement before ordering, installing, or cutting chimney penetrations.

SCALE CHECK: this box must measure exactly 6 inches long.

If it does not, adjust print scale slightly (often 100-103%) and reprint this page first.

Print and assembly instructions

1. Print page 1 at Actual Size or 100% first. Do not use Fit to Page, Shrink, or Scale to Fit.
2. Measure the 6 inch scale box above. Adjust scale only if needed, then print all tile pages.
3. Each tile has a heavy CUT BORDER. Cut along that border before taping pages together.
4. Assemble tiles using the grid below: A row is the BACK/CHIMNEY side; C row is the FRONT/DOOR side.
5. Tape matching edges together: A1 touches A2, A2 touches A3, B1 touches C1 vertically, etc.
6. Verify final dimensions and flue center before installation or cutting.

Template reference dimensions

Outer footprint including rock surround/frame: 22 7/8" wide x 23 1/8" deep
Optional rear heat shield: adds 3" behind stove body
Door + cool-touch coil handle zone: allow 4" in front of glass/body front
Stove pipe: 6" diameter
Flue center: 5 1/4" from back to center and 11 3/8" from each side to center
Classic and LP stoves use the same back-to-center flue reference.
